

Environmental Policy

Power Control Systems, taking into account:

- its aims to design and build switching power supplies for different needs.
- the dimension of the risks to workers, the population and the environment,

is committed to pursuing a policy as part of their business processes to provide a framework for continuous improvement of its performance in compliance with the standard UNI EN ISO 14001:2004

Specifically, Power Control Systems aims to:

- Conceive, develop and manage the activities in order to monitor the environmental performance of the company,
- Comply with legal requirements, in particular environmental,
- Check the risks, prevent fires and prevent environmental pollution

The Environmental Strategy of Power Control Systems is defined as follows:

- to promote the highest standards of energy management,
- to ensure that the operativeness will cause minimal disorder visible and audible to the surrounding population,
- to reduce the possible electromagnetic impact
- to undertake programs of waste management based on reducing, reusing and recycling,
- investing in the development of new technologies that encourage the introduction of sustainable energy sources,
- Implement training, information and education programs for employees, designed to make everyone aware of the environmental impacts of the activities and needs of its contribution in the achievement of the aim set by the management.

By achieving these objectives we intend to develop a competitive enterprise in compliance with the principle of sustainable development. The environmental policy is available to anyone who requests it. The specific objectives are established annually by management and communicated to all staff.
